

# Lasts through hell and high water.

## LINERITE® II Composite Batterboard

Only LINERITE® II Composite Batterboard, from Duramax® Marine, offers **long-term protection for marine structures**. A low-coefficient-of-friction surface is permanently bonded to an elastomer backing forming an **indestructible layer of protection**. This provides an abrasion-resistant surface that **absorbs impact energy**.

Our recessed stud fastener system provides further protection by reducing or preventing the sheering of bolts or studs. **Linerite® II requires little or no maintenance**, offering longer wear life and low replacement costs.

LINERITE® II also doesn't leach harmful chemicals into the air or water. And it's **resistant to microorganisms and extreme weather**. LINERITE® II can be ordered in **various thicknesses and configurations** for bridge fenders, dock facings, ferry terminals, piling facings and boat rails.

Keep repair and replacement costs from wearing you down. Include the LINERITE® II Composite Batterboard System in your marine structures today.
