

GE Tetra™ LED Channel Lighting System.

It can
take the
shake,
rattle
and roll.

Bend, shake and shape it anyway you want to. The GE Tetra™ LED Channel Lighting System, from GELcore, is built to last. To prove our toughness, we subject our channel lighting to a battery of tests designed to meet the strictest military standards, including salt corrosion, temperature, humidity and stringent thermal cycling.

Because of its patent-pending design, the durable Tetra system is a 1:1 replacement for clear red neon, providing more usable lumens, less light loss and up to 80% more energy efficiency. Tetra was the first UL Recognized and Classified LED system for new construction and retrofit signage applications.

Only The GE Tetra Channel Lighting System Provides:

- Best thermal management—Heat generation is produced at power supply and not near LED's for longer life and less maintenance.
- Most durable system design—High weather resistance, no circuit board and no solder joint failure.
- Best reliability—Parallel design ensures no loss of LED strings.
- 5-year warranty on the Tetra strip and power supplies.

Available in: Red, Red-Orange, Yellow-Amber, Blue, Green and Cyan.

Shed new light on an old subject, use the GE Tetra LED Channel Lighting System for your signage and keep your business image up in lights.
